

Innspill i forbindelse med EFSA's Offentlige høring av soya DAS-68416-4 x MON 89788-1 (EFSA-GMO-NL-2013-115)

The VKM GMO panel is of the opinion that data on 2,4-D, glyphosate and glufosinate residue levels including their relevant metabolites in plant material from the field studies is highly relevant for the food and feed safety assessment. The VKM GMO-panel would welcome information on herbicide residue levels and their relevant metabolites in applications for herbicide tolerant GMOs. This information is generally lacking. The Panel acknowledges that this information is not mandatory; however, herbicide residues in herbicide tolerant GMOs may have implications for food and feed safety.
